

Clubhouse update May, 2022

The clubhouse committee has begun to update our doors at the upper level of the clubhouse. We have purchased 2 new exterior doors that meet the local codes for public entrance and exiting. The new doors will swing outward from the building and will be equipped with a push bar exiting device. For quick emergency exiting.

The door located in the stairwell to the basement will have an exit push bar device for quick emergency exiting.

The basement level is not ready at this time as the present exit door does not meet basic door width requirements for current code compliance. The existing door is installed in an area made by concrete. We feel that the door should be moved into an area where we presently have an overhead Garage door.

We will be installing 2 new emergency light units one in the office and one in the clubhouse. These light will turn on when there is a power failure.

The club house and the office have just have a plumbing emergency The drains were clogged. A plumbing company was called to clear the problem.
